

Compass Curriculum for Students

Social-Emotional Learning for Your Child

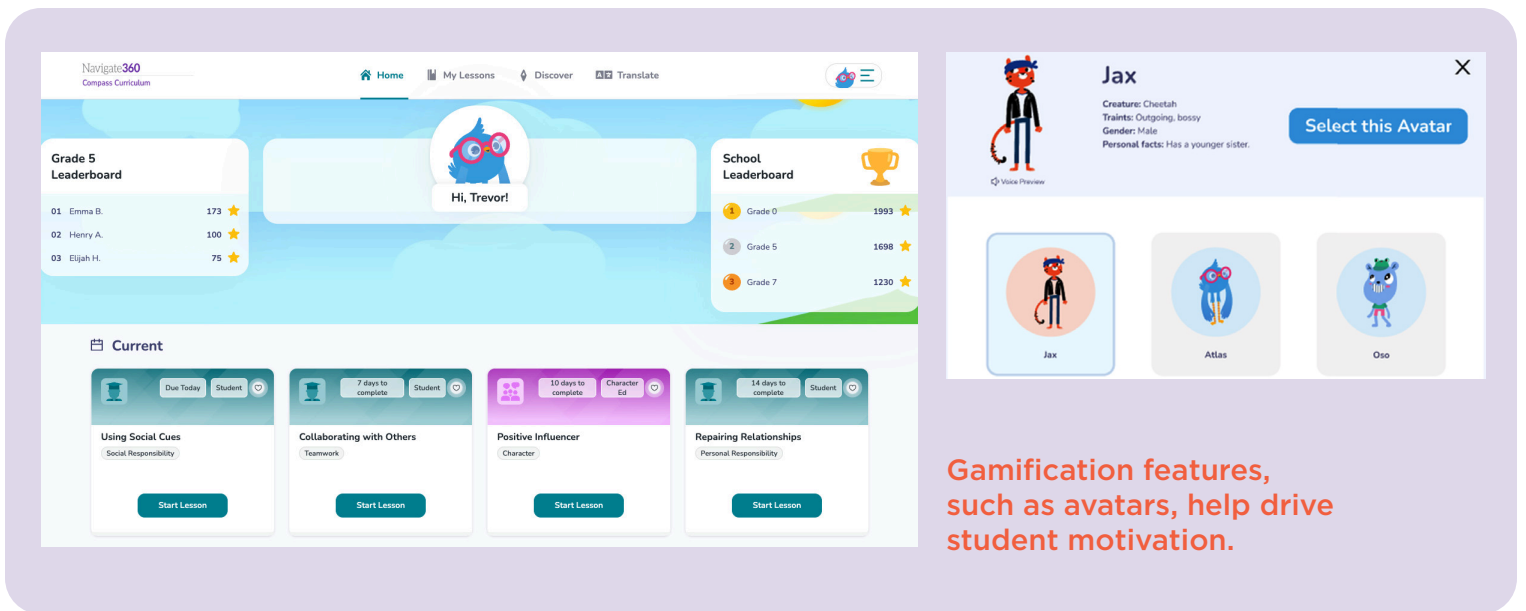

The need for social-emotional learning (SEL) in schools has become increasingly apparent. **The challenges today's youth face are unprecedented and uniquely difficult to navigate** for both students and their families. The impact these challenges have on students' mental health are concerning, and if unaddressed, can be problematic.

Navigate360 is working to redefine the very concept of "safe" to encompass not only physical security, but also the social and emotional well-being of all students. These basic needs must be met before our children are mentally equipped to pursue academic learning.

That is why our school is implementing **Compass Curriculum for Students**, to help equip students with the knowledge and tools they need to improve their social and emotional health.

The program's curriculum consists of short, digital lessons delivered to students each week. Each lesson includes interactive elements such as videos, games, quizzes, and articles.

Gamification features, such as avatars, help drive student motivation.

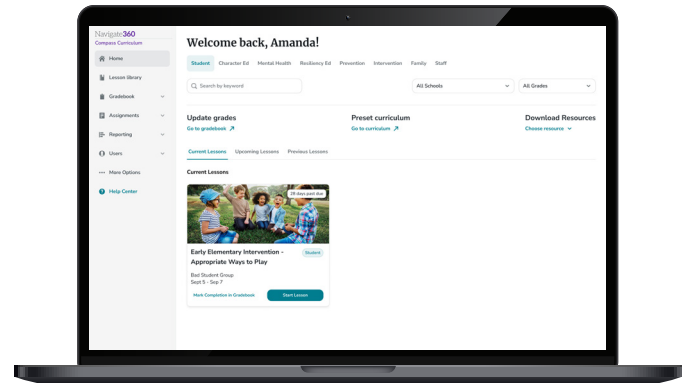

COMPASS CURRICULUM FOR STUDENTS PROVIDES:

- Age-appropriate lessons for grades K-12 designed to meet the needs of students.
- Engaging content that students understand. The robust content library features more than 3000 student lessons.

WHAT ARE THE BENEFITS?

- Improves student engagement and academic performance.
- Improves classroom behavior and school climate.
- Helps students build and maintain positive relationships.
- Helps students better manage anxiety, stress, and complex emotions.
- Improves self-awareness, self-management, social awareness, decision-making, and relationship skills.
- Helps students set and reach positive goals.

We encourage families to discuss the targeted topics with their students each month to help reinforce learning at home. Ask your school if they have Compass Curriculum for Families to support these discussions!

Students who participate in SEL programs increased their academic performance by 11 percentile points compared to those who don't participate.
