

Equip Multidisciplinary Teams with Navigate360 Threat Assessment Training

CSTAG Training Developed in Partnership with Dr. Dewey Cornell

School districts have a duty to create a safe and secure environment that enables students to learn and thrive. CSTAG training is instrumental in empowering your team to identify and improve outcomes for students exhibiting concerning behaviors. This training, coupled with our Behavioral Case Manager software, is a powerful tool for keeping your school community safe.

With CSTAG Training through Navigate360, you will:

- Support your teams with evidence-based training.
- Ensure teams use consistent and unbiased processes.
- Reduce violence with a proactive approach.

Support Staff with Flexible Training

Our blended learning format combines in-person and virtual training to provide flexibility for time-constrained team members. They will learn the basics with practical application exercises and scenarios to ensure comprehension of methodology.

Leverage Expert Guidance

Implementing training developed by renowned industry experts and adopting evidence-based, leading methodologies ensures that your teams can effectively assess cases and achieve successful outcomes.

Build Processes on a Foundation of Consistency

CSTAG training equips school districts with a consistent evidence-based methodology and assessment model, enabling early identification, thorough assessment, and swift response to potential threats within the educational environment.

CSTAG Training

CSTAG Level 1

In this course, participants will build their background knowledge on threat assessment, learn strategies for executing a threat assessment, and receive an in-depth presentation of the CSTAG program, delivered by four leading experts on school threat assessment.

CSTAG Level 2

Participants work together in teams to apply what they learned in Level 1 through a series of case exercises using the CSTAG model. As participants work through the cases, they become increasingly complex and require careful analysis and collaborative teamwork to solve.

CSTAG for Law Enforcement

Law enforcement officers will learn about behavioral threat assessment and their role on a multidisciplinary threat assessment team, the CSTAG model, and how it is used in a school setting.

CSTAG for Staff

School staff will receive an overview of the CSTAG model and learn how they can support behavioral threat assessment and violence prevention efforts in their schools.

Align Teams for Better Outcomes

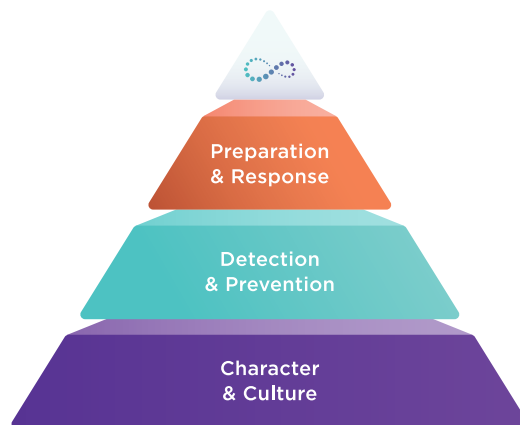

Training is developed specifically for teams to gain better alignment in functional roles, experience easier implementation of the program, and increase collaboration. The result is an optimal team capable of consistent processes while steering more students onto a path of safety.

Set a course for zero incidents.

Take a layered, holistic approach to school safety with Navigate360 technology, training, and guidance to move you closer to your goal.
